To whom it may concern,

As a passionate, budding web developer, enthralled by new technologies, I'm actively looking for a dynamic, international team to which I can contribute as a trainee. Fresh from a rich, professional background, and a recent 5-month intensive training in full stack web development with the Wild Code School, I'm ready to put my technical and soft skills to work in a collaborative work environment to help realise exciting, innovative projects, such as those realised at your company.

During my training at the Wild Code School, I developed a strong foundation in React, developing a variety of projects, such as an application that provides weather forecasts and corresponding clothing recommendations in collaboration with a team of four people. This application employed dynamic user inputs and data handling to help users dress appropriately, adapting suggestions according to the forecast, their preferences and planned activities. I was responsible for retrieving and interpreting meteorological data, integrating external APIs and dynamically adapting the display according to weather conditions. This experience enabled me to hone my React and TypeScript skills and deepen my knowledge of front-end development and Agile project management.

My professional career in Australia and France has also enabled me to acquire valuable cross-disciplinary skills. As a teacher of English and Computer Science, I led programming workshops and supervised collaborative projects, reinforcing my ability to render complex concepts accessible, and work as part of a team.

My experience as a customer success agent at Atelier Rosemood in Nantes, enabled me to develop a rigorous approach to customer service and a deft ability to adapt in a multilingual environment, an experience that has yielded many effective work relationships, and many a happy customer.

As a result of this rich professional experience, I'm attracted by projects, such as yours, that combine technological innovation with high standards of user experience. I am highly adaptable, and would gladly accept the opportunity to meet with you and speak in depth about my motivation and the wealth of experience I could bring to your team.

I eagerly await your reply, and look forward to working together in the very near future.

Kind regards,

Cyrus Weir

- **DATTA (2016) :** National STEM Conference for Science and Technology Education (AU)

PROFILE

As a web developer with a varied professional experience spanning both French and Australian work environments, I have recently acquired training in full-stack web development, and am looking to deepen this learning in a trainee (alternance) position. I'm passionate about further developing my skills and contributing to the creation of collaborative projects that bring to life intuitive projects focussed on improving user experience.

WORK HISTORY

Rosemood, Nantes, France (2019-2024)

English language proofreader & customer success

- Helping customers personalise their products using online software and a mobile application.
- Design and maintenance of an automated chatbot answering frequently asked questions from English-speaking customers.
- Analysing customer feedback to optimise the user experience and improve conversions.
- Working as part of a trilingual team and collaborating with the marketing teams.

Roxby Downs Area School, Australia (2014-2018)

English & IT teacher | Head of Middle School (2018)

- Supervision of school programme development in computing and science (middle school, classes 7-9).
- Running IT design workshops and introducing the fundamental concepts of coding.
- Management and coordination of a teaching team to ensure an effective learning environment.
- Direct contact with students and parents to ensure student success and well-being.

WEB DEVELOPMENT PROJECTS

Github: <https://github.com/CyrusWeir>

WeaRther Forecast (React, TypeScript, CSS)

Interactive application that displays weather forecasts and personalised suggestions for clothing adapted for current weather conditions and personal preferences.

Casse-Croûte (React, TypeScript, CSS, Express)

Collaborative platform with user management and authentication for sharing and discovering recipes.

NeoDev (HTML, CSS, JavaScript)

Showcase site demonstrating the possible functionalities of a social network dedicated to junior developers looking for work.
